

Please join the Washington State University Energy Program on Wednesday, May 17, 2017 from 12:00 to 1:00 PM Pacific Time for “**Stem the Loss: Hot Water Systems in Multifamily Buildings**”. This no-cost webinar is part of Bonneville Power Administration’s *Emerging Technologies Showcase* series.

[Click here to register.](#)

Central hot water heating systems are popular for multifamily housing projects as they free up rentable space, centralize maintenance, and mitigate costly repairs. However, heat loss associated with systems that are in modern buildings with low flow plumbing fixtures has been measured at 35-70%! This presentation highlights a pilot study by Ecotope, with support from Bonneville Power Administration, which compares the performance of three recirculation technologies in different apartment buildings, with the goal of minimizing energy loss. Also featured is the metered performance data for the heat pump water heating system installed in each building.

A question and answer session follows the presentation.

Sponsored by the Bonneville Power Administration (BPA), these webinars bring you the latest information about emerging technologies, practices, and tools that BPA is considering for future research opportunities or focus areas.
